

Bead mastic- terostat VII

Bead mastic is a permanently plastic sealant used as a sealing strip. We offer two types of bead mastic: terostat VII and terostat 81.

Terostat VII is a solvent free, permanently plastic, pressure sensitive sealant based on synthetic rubber. The material exhibits very good water and aging resistance. Due to its tackiness the sealant adheres to all clean and dry surfaces.

Technical data:

Colour: white

Odour: none

Solids: 100%

Density: ca. 1,69 g/cm³

Consistency: plastic

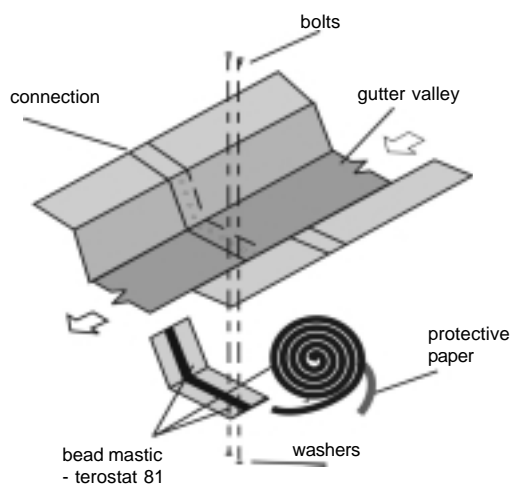

Elastograph value: ca. 0,172 Nm

Tackiness: low

Paintability: can be painted

In service temperature range: -40°C to 80°C;

Bead mastic- terostat 81

Terostat 81 is a high quality, strongly adhesive sealing band based on butyl rubber with plasto-elastic properties. The particularly strong tackiness provides a reliable sealing effect. It is self-welding and aging resistant.

Although both types can be used for sealing purposes in a wide variety, terostat VII is primarily used for roof while terostat 81 is used for heavy duty sealing of valley gutters.

Technical data:

Colour: black

Solids: 100%

Density: ca. 1,26 g/cm³

Consistency: soft, plasto-elastic

Elastograph value: ca. 0,115 Nm

Tackiness: very strong

Overpaintability: can be painted

In service temperature range: -40°C to 80°C;

Storage:

The product is frost resistant. Recommended storage temperature varies from 10°C to 25°C. The product shelf-life is 24 months. In case of terostat 81 the shelf-life is virtually unlimited when stored cool and dry.
